

### **TYPE 45 DESTROYERS**

#### **Metallock secures major marine contracts from VT Shipbuilding and BAE Systems**

Metallock Engineering UK Ltd has worked within the Fleet Support yard for many years on both commercial and naval vessels and has been awarded a major In-Situ Machining contract by VT Shipbuilding on the new Type 45 Destroyer Project, which is now under way.

Subsequently, Metallock has also secured a further Type 45 contract, this time with BAE Systems, Scotstoun for all the stern tubes, intermediate and aft 'A' frames, plummer blocks and propulsion motor/ thrust shaft couplings. Metallock has now secured all the in-situ machining work for these MoD contracts involving vessels one to six over the coming years.

Metallock Engineering's in-situ machining and metal stitching expertise has served the marine industry throughout the world since the company's formation in 1947.

As a result Metallock Engineering UK is now a household name in the global marine world.
